

JANUARY 2021 MARINE SOFTWARE UPDATE

In an ongoing effort to improve our products and provide enhanced features to existing users, we are pleased to announce the **Q1 2021 marine software update** for Fusion[®] marine stereos.

It provides improved functionality and a more user friendly menu system.

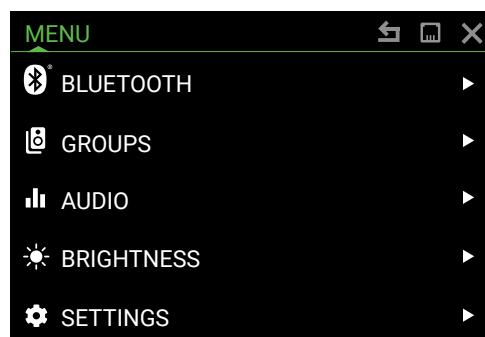

The new update will be available via over-the-air software updates from the free Fusion-Link[™] app on compatible Apple[®] or Android[™] devices.

Alternatively, you can download the update for free from the Fusion [Support Center](#) or the product pages on [fusionentertainment.com](https://www.fusionentertainment.com), to update your stereo using a USB flash drive.

SOFTWARE FEATURES

1. EASIER NAVIGATION IN MENU SETTINGS

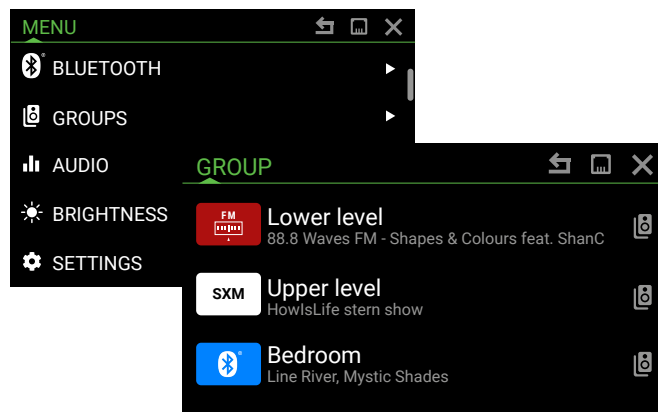

The Menu Settings Screen has been simplified, allowing for more streamlined access to the Source Menu, Stereo Grouping, Audio Settings, Brightness Settings and System Settings.

2. STEREO GROUPING NOW IN MENU SETTINGS

The Stereo Grouping feature has now been moved into the Menu Settings Screen, under the 'GROUPS' tab allowing for quicker access.

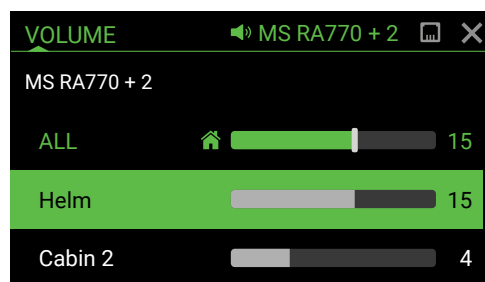

Stereo Grouping allows you to play the same audio source across multiple networked stereos in sync.

3. SIMPLIFIED VOLUME SCREEN

The Volume Screen has been refined with the addition of numbers next to the volume bars, for easier reading of volume levels.

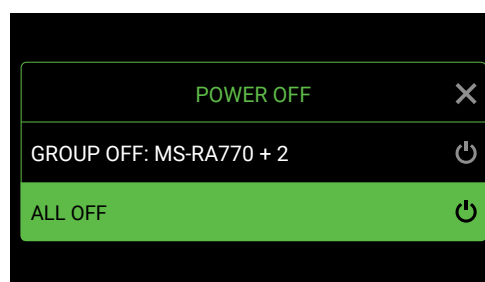

The name of the stereo has also been added to the screen for easier identification of the stereo being controlled.

4. NEW POWER OPTIONS SCREEN

When connected to the PartyBus™-Network, long pressing the Power Button will bring up the new Power Options Screen (*this will turn off your stereo if it's not connected to a Fusion® stereo network*).

Power Options allow you to switch ON or OFF any connected Apollo™ Series stereo on the PartyBus-Network remotely from another Apollo Series stereo or wired remote.
